Please do not override the wise decision of the CT DEP to disallow the installation of pipelines/cables across Long Island Sound. This valuable body of water is already ecologically fragile, especially with regard to the shellfish beds so vital to our state's economy....to say nothing about the impact of the clear-cut area that would be required across land trust preserves, farms, nature trails and fragile wetlands.

strongly oppose the plan to place this pipeline across Long Island Sound.

The proposed Islander East pipeline unnecessarily damages sensitive ecosystems. While Long Islanders deserve energy, the alternative route that would have significantly less impact seems to make a lot more sense.

Please choose the path of least destruction.

Sincerely,

Imre John Berty
